DEPLOY IN KUBERNETS CLUSTER:

The screenshot shows the Kubernetes Dashboard interface in a web browser. The browser's address bar displays the URL: `eu-de.containers.cloud.ibm.com/kubeproxy/clusters/cdmchlf02rs9ji9pqdg/service/#/deployment?namespace=default`. The dashboard header includes the Kubernetes logo, a namespace dropdown set to 'default', a search bar, and navigation icons. A blue breadcrumb bar indicates the current path: **Workloads > Deployments**.

On the left sidebar, the 'Deployments' menu item is highlighted. Other visible menu items include Cron Jobs, Daemon Sets, Jobs, Pods, Replica Sets, Replication Controllers, Stateful Sets, Ingresses, Services, Config Maps, and Persistent Volume Claims.

The main content area features two summary cards at the top: 'CPU Usage' and 'Memory Usage', both displaying the message 'Waiting for more data to display chart...'. Below these is a 'Deployments' table.

Name	Images	Labels	Pods
● jobportal	Show all	Show all	1 / 1

The Windows taskbar at the bottom shows the search bar, task view button, and several application icons. The system tray on the right indicates the time as 20:29 on 03-11-2022.
